

A landing pad to help you innovate faster

OcyonBio

ocyonbio.com

- Turnkey PDMO (partnership development management organization) and 180,000 SF facility dedicated to research, clinical trials, and commercialization to advance R&D and pipelines faster in a cGMP facility
- The PDMO partnership involves the design, construction, hiring, and maintenance of the facility. Plus, the PDMO can manage your **HR, accounting, financing, supply chain, warehousing, and shipping & receiving**
- Your company will have full control of people, facility, costs, IP, and schedule

Hundreds of companies have focused their scientific muscle these past three years on curing cancer, blindness, musculoskeletal diseases, and other illnesses. For cancer alone, an estimated number 300+ companies are currently working to find and develop cures. While advancing their science, most companies are simultaneously concerned about strategic investors, burn rate, preserving their founders' equity, and planning for their next investment round.

OcyonBio's PDMO helps support this growth and addresses the considerable gap needed for cGMP space, supply chain, and scientific talent for the expected hurdles of clinical trials and commercial launches.

Areas of Focus

- OcyonBio is focused on clinical and commercialization needs
- Gene and cell therapy
- Biologics
- Viral vectors

Services & Capabilities

- CMC (Chemistry, Manufacturing and Controls) data and regulatory processes that lead to both effective and safe pharmaceutical drugs for the consumer
- OcyonBio's finance team will prepare & manage your Puerto Rico R&D tax credit program, which could represent an annual cash rebate of up to 50% through sellable tax credits for dollars invested on eligible R&D salaries, M&E, and supply costs
- Supports phase-appropriate development for early development (lab), preclinical (vivarium), clinical (trials), and commercial start (scale-up)
- cGMP manufacturing: process & analytical development (interconnected autonomous manufacturing), cell selection, activation, engineering (viral manufacturing) and expansion (placement), final packaging (fill & finish), and quality release (QA/QC)
- Viral vector manufacturing (AAV, LOENTI, RETRO)

Available Assets

- Shared freezer and incubator farm
- ISO 8/7-ready space that can be customized to tenants' needs

Sourcing Talent

- OcyonBio has a partnership with the University of Puerto Rico in Mayagüez focused on gene and cell therapy that creates a direct pipeline for junior scientific and business talent
